DIGITHOTH

WHERE BOOK INDUSTRY MEETS BLOCKCHAIN

Contents

For Writers and Freelancers

For Business

Proposal

Introduction

Digithoth is a payment solution for the 143 billion dollar book industry which occupies readers, writers, book vendors and publishers. It will bridge the gap between the old methods of payments and connect all the buyers and sellers virtually on a joint platform in form of a digital archive encircling small business owners, book vendors to large publishing houses where they can easily transact their businesses as well as contribute securely through the blockchain.
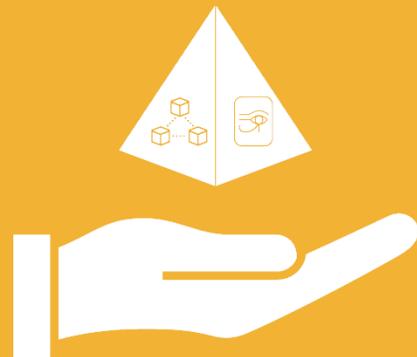

Problems

The industry have some consistent problems in common i.e. privacy invasion, anonymity, mode of payment and content distribution etc.
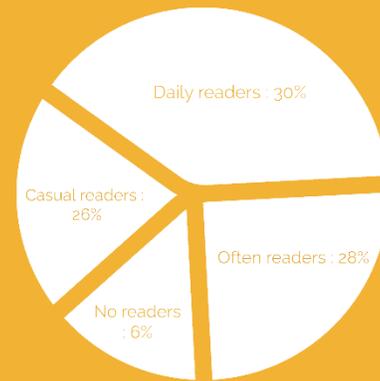

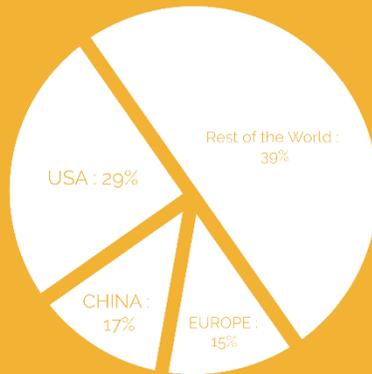

- The publishers keep a large chunk of the revenue that is being generated from sales and the author merely receives about 6 to 10 % of the net amount.
- All types of conventional payment methods require full personal details which means over-billing and loss of personal information is at stake.
- With the passage of time it has become rather impossible to preserve and save the original and extremely rare manuscripts. Due to human race's negligence, volatile nature & prejudices several pieces of knowledge have been lost to time.
- Readers are deprived of thousands of ideas and thoughts which are still out there ready to be shared given the right platform.

Stats

Publishing Perspectives reports today on a new global book market study project, BookMap, which estimates the global book markets to be valued at $143 billion.

Rest of the World : 39%

USA : 29%

CHINA : 17%

EUROPE : 15%

Daily readers : 30%

Casual readers : 26%

Often readers : 28%

No readers : 6%

Solution

- DIGITHOTH aims to develop not only a payment solution but an open source digital archive.
- The writers (especially the new ONES) can upload their work and float their ideas to the readers at large without going through the stringent policies of the publishing houses.
- The architecture which depends upon the Blockchain technology carries a huge advantage for the any sector of any industry.
- Once more and more companies join DIGITHOTH, the use of DIGITHOTH in the industry will eliminate large transaction costs, because all transactions will eventually be made through one united currency.
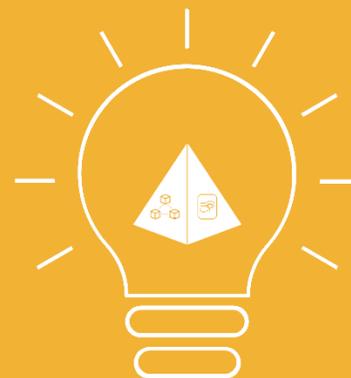

Legal

Security RISKS

Through Blockchain data of transactions is stored across vast networks of computers that constantly check and verify information with each other. The Blockchain system is near-unbreachable even to the sharpest of cyber-minds.

Anonimity

Due to the Ethereum based Blockchain platform, digital currency transactions will allow high anonymity.

Legality

Switzerland is a haven for any ICO around the world offering a set of fair rules and regulations which help an ICO reach towards its full potential. That's why for DIGITHOTH team it was necessary to start an ICO from where the legal implications were favorable as well as legitimate.

AML/KYC

Due to every ICO becoming a scam nowadays DIGITHOTH token aims to follow the rules and regulations set up by FINMA(Swiss Financial Market Regulating Authority) and obeys AML/KYC policy in such a way that the least amount of personal DATA is required and keeps the user anonymous.
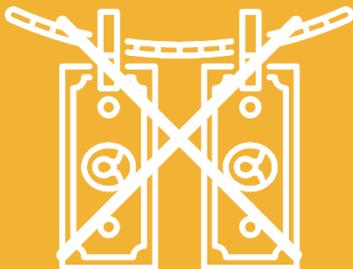

Plan Of Action

Website
DIGITHOTH website is already LIVE and working with constant bug fixing from our team to make sure it never shuts down and serve as many as it can.

Code
The official DIGITHOTH Token code is available on GITHUB and is being verified and audited by different programmers and blockchain developers around the globe.

Digital Archive
Digital archive will be developed by DIGITHOTH which will be maintained by AI. This Digital Archive will be the first of its kind which aims to become not only a platform for writers but for all the sectors of the industry.

AI
State-of-the-Art Artificial intelligence will be used in many processes such as Digitization and translation of books, avoid duplication of content and management of the complete open-source decentralized database.

Benefits

For General Public
DIGITHOTH's main aim is to provide access to knowledge while maintaining anonymity and security through blockchain for people at large.

Adoption
As more and more people join the cause for decentralized knowledge the demand will be automatically raised which will increase the price and adoption of our Token.

Awareness
The introduction of blockchain technology in the daily life is necessary due to exploitation of privacy. DIGITHOTH will also host an awareness campaign throughout the book industry.

Knowledge Ecosystem

The ultimate objective of DIGITHOTH is to eliminate cultural barriers and establish a swift medium through which knowledge of all sorts and genres can be obtained without any hassle thus making a perfect ecosystem.
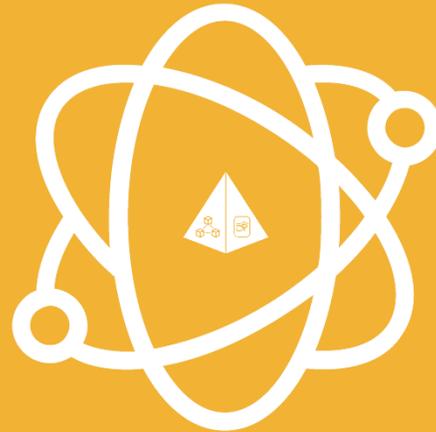

For Writers and Freelancers

Any kind of content can be bought or sold on the digital archive which will be readily available and secure through the process of blockchain and escrow.

Content Ownership

Any new content writer will be provided full authority and control over his content and will be free of creativity theft. Which will in turn promote more creativity and liberate the idea.

For Business

For publishers, website owners and venture capitalist/angel investors which will be holding DIGITHOTH Token will be see a commulative price appreciation of 1% reflected after each phase of Token Sale.

Financial Independence

Book industry will have its own currency for every small and large transaction on a global scale. This mode of payment will be swiss-regulated secure, anonymous, efficient and low-cost thus eliminating the dependence on banks.

Money Channelization

DIGITHOTH will allow secure conversion of fiat currency to crypto-currency via credible exchanges throughout the world. Furthermore the DGT token will be allowed to trade against any other ERC-20 Token of certain value listed on the Ethereum Blockchain Network.
